KALAMASSERY

REPORT ON THE COMPUTER SCIENCE PROJECT

Name :

Std. : **Roll No.:**

Project :

.....

Certified that this is the bonafide report of the project work in Computer Science done in this school, submitted for Senior School Certificate Examination (AISSCE) held in 2021 at Rajagiri Public School, Kalamassery.

Examiner

Project Guide

Principal

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my Computer Science Teacher **Mrs Binny Varghese** who guided me through the course of the project. My heart felt thanks to our principal **Rev.fr. Varghese Kachappilly CMI** and The school management

SYNOPSIS

Web Scraping is known by many other names, depending on how a company likes to call it, Screen Scraping, Web Data Extraction, Web Harvesting and more, it is a technique employed to extract large amounts of data from websites.

Scraping is the process where the data is extracted from various websites and repositories and are saved locally for instantaneous use or analysis that is to be performed later on.

Most websites that we view regularly, allow us only to see the contents and do not generally allow a copy or download facility. Manually copying the data is time consuming and can take days and weeks.

Web Scraping is the technique of automating this process so that an intelligent script can help you extract data from web pages of your choice and save them in a structured format

A web scraping software will automatically load multiple web pages one by one, and extract data, as per requirements. It is either custom-built for a specific website or is one, which can be configured, based on a set of parameters, to work with any website. With the click of a button, you can easily save the data available on a website to a file on your computer

The basic and important aim of the web scraping process is to scrape information from a different and unstructured website and transform it into a comprehensible structure like spreadsheets, database or a comma-separated values (CSV) file

from the operation viewpoint, a web scraping look like manual copy and paste task. The difference here is that this job is done in an organized and automated way

MODULES AND CONCEPTS USED

<u>LIBRARY</u>	<u>CONCEPTS USED</u>
import csv	File handling – csv file
import BeautifulSoup	Parsing through HTML data
import requests	Sending HTTP requests

CONCEPTS AND FUNCTIONS USED

request.get()

html.parser

.content()

find()

get_text()

strip()

For loop

If else statements

Csv file handling methods

-csv.writer

-csv.reader

PROGRAM LISTING

'''

programme to web-scrape data from

1)indeed.co.in

2)https://www.monster.com/jobs/search/

3)https://www.simplyhired.co.in/

these are three different job posting web sites

packages installed using pip

1)pip install beautifulsoup4 (its used for parsing through html-code)

2)pip install requests (its used to send a http request to the target server and get a response object)

'''

#DONE BY JOEL T MATHEW

```
import requests
```

```
from bs4 import BeautifulSoup
```

```
import csv
```

```
ch=1
```

```
while ch!=0:
```

```
    print("choose any of the following to show job availability for that  
    particular one in csv files")
```

```
    print("1.teacher")
```

```
    print("2.doctor")
```

```
    print("3.Data scientist")
```

```
    print("4.exit")
